

=====
Rename Solaris Server
=====

Edit the following files:

/etc/hosts
/etc/nodname

List all network interfaces: ifconfig -a4 and ifconfig -a6

Use ifconfig <interface> unplumb for any interfaces that you no longer wish to use.

Edit /etc/hostname.<interface-you-plan-on-using> to change the server's IP address.

Remove any /etc/hostname.<interface> files for unplumbed interfaces.

Edit /etc/netmasks – Change the netmask to the new subnet's netmask.

Edit /etc/defaultrouter – Change to the new default gateway

Edit /etc/vfstab – Remove any nfs mounts that are no longer valid

Reboot and check configuration
